TRISTAN KARL REYES

Computer Engineering Student

Phone: 09615791898
Email: karlt375@gmail.com
Portfolio: E-Portfolio

OBJECTIVE

Final-year Computer Engineering student at Jose Rizal University and Dean's Lister, with hands-on experience in machine learning, web development, and database design, backed by AWS Academy and CompTIA certifications. Seeking an OJT opportunity in software development, data, or IT systems where I can apply my technical skills and learn from experienced engineers.

EDUCATION

Bachelor of Science in Computer Engineering Expected Graduation: 2027
Jose Rizal University | Dean's Lister

PROJECTS

Printstant: Print Queue and Shop Management Platform | *Venture Viability Analysis, Wadhwani Foundation*

- Member of a 3-person venture team that designed a web platform letting students upload files remotely, track print queues in real time, and get automated price quotes from nearby print shops.
- Handled marketing, contributing to a go-to-market plan built on social media (Facebook, Instagram, TikTok), campus flyers, and direct pitches to print shop owners.
- Validated the problem through 10 in-person interviews and tested a working web prototype with 3 users, all of whom rated it positively. The venture scored a 93.33% Venture Viability Index.

Lip Condition Classification Using CNNs | *Research Paper*

- Co-authored a study comparing EfficientNetB0 (transfer learning) against a custom Vanilla CNN to classify lip images as Chapped, Healthy, or Medical.
- EfficientNetB0 reached 88.89% test accuracy versus 73.33% for the Vanilla CNN, using two-phase training, data augmentation, class-weight balancing, and L2 regularization.
- Evaluated with confusion matrices and ROC-AUC curves, and exported both models to TensorFlow Lite for potential mobile deployment. Tools: Python, TensorFlow/Keras, scikit-learn.

Barangay Poblacion Portal | *CPE C315 Final Project*

- Co-developed a multi-page barangay web portal in HTML, CSS, and JavaScript where residents can read community news, request barangay documents, file complaints, and look up hotline numbers.
- Built add, edit, and delete features for document requests and complaints, with entries saved in the browser's local storage.

PROJECTS (CONTINUED)

Laboratory Borrowing Portal | *Software Design Project*

- Co-developed a web portal with a 4-person team to replace the paper-based equipment borrowing process in the university's computer laboratory, with separate borrower and custodian views.
- Borrowers sign in with Google, check item availability, submit borrow requests, and track their history; custodians approve or reject requests and manage inventory from a dashboard.

CERTIFICATIONS

- CompTIA Tech+ (September 2025)
- Relational Database Developer Certification, freeCodeCamp (November 2025, approx. 300 hours)
- AWS Academy Graduate: Machine Learning Foundations (April 2026, 20 hours)
- Huawei ICT Academy: Overview of AI, Certificate of Completion (March 2026)
- Ignite Philippines, Wadhwani Foundation: Certificate of Content Completion (April 2026, 42 hours)

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, HTML, CSS, SQL

Databases: MySQL, Supabase

Libraries and tools: scikit-learn, TensorFlow/Keras, Flask, Google Colab

Concepts: Machine learning, deep learning, image classification, relational database design
